
3 Determine your homepage content

The Drupal platform also offers a lot of different ways to display any content you want to feature on the homepage. Once you know what you need for your homepage, your GeorgiaGov representative can help you decide what functionality will best display that content.

Some items you may want to consider for your homepage include:

- Feature image - image with a link to another page (different sizes are available)
- Image Rotator - a simple carousel of images (different sizes are available)
- Latest News listing (press release list)
- List of Links to popular content
- Upcoming Events listing
- Social Media links
- Twitter feed

Now, before you get too excited and say, "I want all of them!" remember that **less is more**. Our analytics consistently show that 98% of users don't scroll down the page at all - so you'll be better off selecting the top 3 or 4 items that are most important to highlight on the homepage, rather than overwhelming users with a lot of links, buttons, and features they don't need.
